

Back-End Developer Intern

Taha Nasrollahi

tahanasrollahii@gmail.com | 09014829025 | Malard, Tehran, Iran | [LinkedIn](#) | [Github](#)

PROFILE SUMMARY

Backend Developer Intern with hands-on experience building RESTful APIs using Django, DRF, and FastAPI. Skilled in relational database design, async task processing with Celery, Redis caching, and containerized deployments with Docker and CI/CD (GitHub Actions). Experienced in automated testing with pytest and integrating third-party/LLM-based APIs. Focused on clean architecture and maintainable, scalable backend systems.

SKILLS

Languages & Frameworks: Python, Django, DRF, FastAPI, SQLAlchemy

Databases: PostgreSQL, Redis, Alembic

DevOps & Testing: Docker, Git, CI/CD, Celery, Pytest

Auth & API: JWT, OTP Auth, Rate Limiting, RESTful API Design

AI: LLM API Integration, Prompt Engineering

PROJECTS

Eventra — AI-Powered Personal Monitoring Assistant [🔗](#)

01/2026 – 02/2026

Python · FastAPI · SQLAlchemy · PostgreSQL · Celery + RabbitMQ · Redis · Groq LLM · MinIO (S3) · Docker · React

- Built a full-stack asynchronous monitoring system for RSS feeds and webpages, powered by Groq LLaMA 3.3 70B, with SHA-256 content change detection.
- Designed an event-driven architecture using Celery + RabbitMQ + Redis, including scheduled polling, dead-letter handling, real-time WebSocket alerts, and daily AI digest emails.
- Implemented production-grade observability with structured logging, Prometheus metrics, health checks, and Redis-based rate limiting.
- Added JWT authentication, user-scoped presigned S3/MinIO uploads, Alembic migrations, and comprehensive async testing.
- Containerized the entire stack with Docker Compose and built a GitHub Actions CI/CD pipeline for automated testing and deployment.

Kelaasor — Bootcamp Management Platform [🔗](#)

04/2026 – 08/2026

Python · Django · DRF · PostgreSQL · Redis · Celery · Docker

- Built the core Django REST Framework backend for a bootcamp platform (listings, chapters, media), with custom phone/OTP authentication via SimpleJWT and Redis-backed rate limiting.
- Engineered an enrollment state machine with Buy Now Pay Later support, automating multi-installment payment schedules; integrated Celery/Redis for async tasks like SMS notifications via Kavenegar.
- Developed a blog module with Markdown support and comments; containerized with Docker and covered with a Pytest test suite.

Briefly — AI-Powered Audio Intelligence Platform [🔗](#)

07/2026 – 07/2026

Python · FastAPI · RabbitMQ · Celery · PostgreSQL · Redis · Docker

- Built an async FastAPI service for meeting transcription, summarization, and action-item extraction, using LLaMA 3.3 through the Groq API for inference.
- Split background work into dedicated Celery queues over RabbitMQ — separating audio chunking, transcription, and AI inference — so slow AI calls don't block lighter jobs.
- Modeled job state, file metadata, and structured AI responses with async SQLAlchemy and Alembic migrations.
- Added a WebSocket layer to push job-status updates to clients as background tasks progress, avoiding client-side polling.
- Used Redis for caching and as the Celery result backend to keep the pipeline responsive under concurrent audio jobs.

- Defined the full service — API, Celery workers, Redis, RabbitMQ, PostgreSQL — in Docker Compose for a reproducible development environment.

StudyMate — AI Study Assistant [🔗](#)

06/2026 – 06/2026

Python · FastAPI · PostgreSQL · Redis · Docker · OAuth2

- Built an async FastAPI service offering AI-generated summaries, quizzes, and study plans, integrating OpenRouter's LLM API via httpx.
- Implemented JWT-based authentication with bcrypt password hashing, email verification, password reset, and refresh-token rotation.
- Added Redis-backed rate limiting and brute-force protection, plus global session revocation on password change.
- Modeled the data layer with async SQLAlchemy and Alembic, including pagination and per-user data isolation.
- Cached LLM responses in Redis to cut down on redundant API calls, with a fail-fast startup check when the cache dependency is unavailable.
- Tested the service with an async Pytest suite using mocked external API calls; deployed via a GitHub Actions pipeline with Ruff linting and SSH-based VPS deployment.

WORK EXPERIENCE

Dotnet Developer (Internship)

10/2020 – 12/2020

Avid Samaneh Raymon

Alborz Province, Iran

- Short-term internship covering .NET development fundamentals and introductory team-based software workflows.

Django Developer

2026

Kelaasor

Tehran, Iran

- Contributed to backend development of the Kelaasor bootcamp platform as part of the engineering team.

EDUCATION

B.Sc. Computer Engineering — Software (In Progress)

2026 – Present

Islamic Azad University of Karaj

Karaj, Alborz, Iran

A.Sc. Computer Engineering — Software (Completed)

2024 – 2026

Islamic Azad University of Karaj

Karaj, Alborz, Iran

COURSES

Back-End Python-Django Bootcamp

05/2025 – 08/2025

Kelaasor

Tehran, Iran
